

DLG-certified farm inputs

Potting soil and fertiliser for home and garden use, seeds

**CONTINUOUS
MONITORING**

DLG Certificate 0000

The experts at DLG TestService certify potting soil and fertiliser for home and garden use, as well as seeds, according to the product-specific DLG quality standards. In addition to the criteria specified for this effectiveness test, further product properties can be tested and certified. Potting soil, fertiliser and seeds that pass the tests receive the DLG quality seal.

All DLG-certified farm inputs are subject to constant monitoring. Consistent product quality is ensured by regular repeat tests or analyses. In addition, samples are taken from the manufacturer or from retailers.

DLG test criteria

Potting soil, bark mulch, bark humus

- Verification of labelling
- Nutrients
- Weight by volume, filling quantity
- pH value
- Salinity
- Plant compatibility
- Organic substance
- Foreign substances
- Content of heavy metals and pollutants
- Human pathogenic germs
- Weed test

Plant fertiliser

- Verification of labelling
- Nutrient content
- Content of heavy metals and pollutants

Seeds

- Filling weight
- Purity
- Germinating capacity

DLG TestService is one of the leading international testing and certification organisations in the fields of tractors, agricultural technology and farm inputs. The DLG's own testing and evaluation standards are practice-oriented and are developed by neutral commissions. In addition to tests according to DLG standards, extensive testing and certification services for quality assurance, according to national and international standards and regulations, as well as customer-specific tests for research and development purposes complete the range of services. The DLG test marks are well known on the market. They stand for neutral, independently verified product quality. They build trust and form the basis for purchasing decisions made by practitioners. dlg-testservice.com
